## Knowledges

---

Languages            Russian — Native

Skills                JavaScript(ES, TypeScript), Angular, React, Vue, Node.js, PHP, Python, MongoDB, My/PostgreSQL, Firebase, HTML/5, CSS/3, Sass, Tailwind, Linux, Bash, Apache, Nginx, Git, GitHub, Bitbucket, Responsive/Adaptive Layout, Hybrid applications(Ionic), Web applications, CRM applications, Thin web client applications, Application architecture, Planning roadmap, UI/UX

## Experience — 20 years

---

April 22 – Feb 23

### Bromin7

New York

#### Full-stack and front-end developer

**Work on the project “Story3([story3.com](https://story3.com)) – a platform to create, read and share stories”:**

- Refactoring of the legacy the backend(API-services);
- Refactoring of the frontend;
- Integration with the Xsolla;
- Integration of the new design;
- Setup of the CI/CD;

The following technologies were used in the project: **React, Ionic Framework, Python(FastAPI), PostgreSQL, CI/CD(GitLab)**

**Work on the backend for the Flutter application about ML face detection with the PyTorch:**

- he development of the backend core(API-services);
- Integration of the PyTorch;
- Setup of the CI/CD;

The following technologies were used in the project: **Python(FastAPI, PyTorch), Firestore, CI/CD(Bitbucket)**

## Roonyx

Rostov

### Full-stack and front-end developer

#### Work on the project “Referral promotion system for advertising company in the Instagram”:

Functional overview:

- The user creates a micro promo web-site with a closed section or sections and puts a link in social networks. When interested Instagram users follow the link to a promo site, they are prompted to subscribe to the client's Instagram account. The system automatically checks the relevance of the subscription, whether it is a duplicate, and also tries to determine how “real” the account is, for example, whether it was just created, and so on. If the checks are passed successfully, then the fee for the “new user” is automatically charged off the client’s account, and the visitor gets access to the closed section.

Responsibilities and tasks:

- Maintenance of the existing and development of new ui;
- Maintenance of the existing and development of new ui elements (including the development for mobile devices);
- Improvement of the performance of ui;
- Setting up of the work with payment service;
- Detection and correction of issues at the frontend;
- Integration with existing services’ API on Ruby;

The following technologies were used in the project: **Ruby 3, Angular 11, PostCSS/SCSS (Material UI),**

#### Work on the project “FormDepot([societyoflegaladvocates.org](https://societyoflegaladvocates.org)) – Legal document generation platform based on the survey Form Depot”:

Functional overview:

- A user who needs a valid legally verified document for any operations (purchase/sale of property, registration of rights, etc.) under the laws of USA can select the appropriate type of step-by-step, non-linear constructor (the sequence and availability of steps may vary depending on the user’s previous choice). Then after the completion of his/her choice, the user pays for one of the types of subscriptions and can download the generated pdf.

Responsibilities and tasks:

- The development of new ui;
- The development of the core for the generator of non-linear form constructor based on configurator;
- Improvement of the performance of ui;
- Setting up of the work with payment service (paypal);
- Integration with existing services’ API on Ruby;

The following technologies were used in the project: **Ruby 3, Angular 13, PostCSS/SCSS (TailwindCSS, Material UI), CI/CD (GitLab).**

#### Work on the project “Employees motivation and performance assessment platform”:

Functional overview:

- After the user registers his company in the system, he/she can conduct cross-sectional surveys using the new algorithm. The user fills in the form with the description of the

survey, he/she can send it to his contact list, and the recipients can follow the link to answer the necessary questions. For companies, for the purpose of anonymity and neutrality, the answers are not tied to individuals, but are displayed in the form of a summary table that can be downloaded as a pdf.

Responsibilities and tasks:

- The development of the platform core;
- The development of the backend generator of API (CRUD, bulk, the development of automatic validation rules for back-/frontend based on the unified sequelize-models);
- Conduction of the preliminary analysis of the old version of the system, detection of issues and creation of the development plan for a new application based on the legacy-functions taking into account the implementation of new features;
- The development of new ui;
- Improvement of the performance of ui;
- Detection and correction of issues at frontend libraries;

The following technologies were used in the project: **Angular 13, Node, JWT, Mysql (Sequelize), PostCSS/SCSS (TailwindCSS, Material UI), Docker, AWS (EC2, RDS, S3, SES), MailJet, CI/CD (GitHub Workflows)**

May 20 – Feb 21

## Sberbank

Moscow

### Full-stack and front-end developer

**The development of the educational platform modules for the SberClass:**

- The development of the platform core;
- The development of new UI;
- Improvement of the performance of UI;
- Managing a distributed development teams;
- Correction of a production processes;

The following technologies were used in the project: **React**

Oct 16 – April 20

## Madpaws

Sydney

### Mobile hybrid developer

**Work on the project “Mad Paws([madpaws.com.au](https://madpaws.com.au)) – Pet Sitting & Walks” hybrid(Android & iOS) mobile application based on the Ionic Framework:**

- The development of the platform core;
- The development of new UI;
- Improvement of the performance of UI;
- Finding a problem areas and fixing them in a frontend libraries;
- Integration with a API-services;

The following technologies were used in the project: **React, Angular, Ionic Framework (Cordova)**

Dec 14 – Present

## Freelance

Novosibirsk

## **Full-stack and front-end developer**

### **Work on a “HBO” projects:**

- The Development of front-end promo sites to enter the Russian

The following technologies were used in the project: **JavaScript**.

### **Work on the project for the “Chemical brothers”:**

- The Development of front-end promo sites to enter the Russian

The following technologies were used in the project: **JavaScript**

### **Work on the project for the “Muse”:**

- The Development of front-end promo sites to enter the Russian

The following technologies were used in the project: **JavaScript**

### **Work on the project for the “Comedy Club” CRM:**

- The development of the platform core;
- Improvement of the performance of UI;
- Finding a problem areas and fixing them in a frontend libraries;
- Integration with a API-services;

The following technologies were used in the project: **Polymer**

### **Work on the project “Nplus1([nplus1.ru](http://nplus1.ru))”:**

- The development of the frontend core;
- Improvement of the performance of UI;
- Finding a problem areas and fixing them in a frontend libraries;
- Integration with a API-services;

The following technologies were used in the project: **PHP, Ruby, Python, JavaScript**

### **Work on the project “IVI news”:**

- The development of the frontend core;
- Improvement of the performance of UI;
- Finding a problem areas and fixing them in a frontend libraries;
- Integration with a API-services;

The following technologies were used in the project: **PHP, JavaScript**

April 10 – Nov 14

## **Homenet**

Novosibirsk

## **Web developer**

### **The Development of a private area for an MTS client in the North-West region:**

- The development of the frontend core;
- The development of new UI components for content management;
- Improvement of the performance of UI;
- Finding a problem areas and fixing them in a frontend libraries;
- Integration with a API-services;

The following technologies were used in the project: **SOAP, PHP, JavaScript**

### **The development the frontend for the Project Management Software:**

- The development of the frontend core;
- The development of new ui components for content management;
- Improvement of the performance of UI;
- Finding a problem areas and fixing them in a frontend libraries;
- Integration with a API-services;

The following technologies were used in the project: **SOAP, PHP, JavaScript**

**The development the frontend for the Homeowner Communication Systems:**

- The development of the frontend core;
- The development of new ui components for content management;
- Improvement of the performance of UI;
- Finding a problem areas and fixing them in a frontend libraries;
- Integration with a API-services;

The following technologies were used in the project: **PHP, JavaScript**

Jan 14 – March  
14

## Reforum

Novosibirsk

### Project manager

**Work on the project «Reforum([reforum.ru](http://reforum.ru))»:**

- Development and project management;
- Workflow optimization;
- Create roadmaps for a project;
- Controlling communications between departments;
- Creation of the editorial department;

Feb 09 – Feb 14

## FIS

Novosibirsk

Novosibirsk

### Web developer

#### Development of games and promo sites for their promotion:

- Creation of 3D graphics for interactive desktops;
- The UI development;
- Creating a game-logic;

The following technologies were used in the project: **Flash, 3Ds Max, Blender, PHP, JavaScript**

## Recommendations

---

### MadPaws, Sydney, Australia

*Eugene has been working with use since 2016 and he was instrumental in building our very first Hybrid app with Ionic. His engineering insights helped us many times to make quick and informed decisions and deliver value to the customer faster. He also helped us with hiring new Ionic Hybrid developers and build our mobile team. Our app has reached it's full maturity and is mainly requires minor maintenance, so Eugene would like to look for the new challenges and we fully support him in this. I recommend him to anyone who is looking for a mobile or web developer*
